

Group Project – Proposal

➤ One-Page proposal (4%)

- **Authoring:** Be sure to put all authors' names on the assignment. **Submit one copy per team.**
- **Due Monday, Dec 1st before Midnight:** please submit an electronic copy to gxl220001@utdallas.edu. Using 1" margins, single-space, and Times New Roman 12-point font.
- This one-page proposal is about your **research question**.
 - ❖ What is your research question? Why are you interested in it? Why is it worth studying? What are the existing findings? What might be your contribution? What kind of dataset you plan to look for? Etc.
 - ❖ The importance of posing a very specific research question cannot be overstated. Without being explicit about the goal of your analysis, you cannot know where to even begin. The widespread availability of rich data sets makes it tempting to launch into data collection based on half-baked ideas, but this is often counterproductive. It is likely that, without carefully formulating your hypotheses and the kind of model you will need to estimate, you will forget to collect information on important variables, obtain a sample from the wrong population, or collect data for the wrong time period.

Group Project – Final Paper

- **Final Paper (8%)**
- **Authoring:** Be sure to put all authors' names on the assignment. **Submit one copy per team.**
- **Due Monday, Dec 15 before Midnight:** please submit an electronic copy to qxl220001@utdallas.edu. Using 1" margins, single-space, and Times New Roman 12-point font. It can be no longer than 10 pages of text (including all tables, graphs, and references).
- After deciding on a topic, we must collect an appropriate dataset. Assuming that this has also been done, we must next decide on the appropriate statistical methods (In this research paper, **please use one of the statistical methods discussed in class**). A successful paper combines a careful, convincing data analysis with good explanations and exposition.

Group Project – Final Paper

- You research paper should include the following sections:
- **Introduction:** The introduction states the basic objectives of the study and explains why it is important.
- **Literature Review:** How is your study related to existing work? What is your contribution?
- **Data:** Carefully describe the data used in the analysis. If you used your own survey to collect the data, a copy of the questionnaire should be presented in an appendix.
- **Empirical Methods:** Present the statistical method(s) and the estimating equation(s) you use.
- **Results:** Show your result and discuss the interpretation and strength of it. Do the coefficients have the expected signs? Are they statistically significant? If a coefficient is statistically significant but has a counterintuitive sign, why might this be true? Etc.
- **Conclusion:** Summarize what you have learned from this analysis.

Group Project – Presentation

➤ In-class Presentation (8%)

- Title Slide: Include team members' full names (and team name if you have).
- 20 mins presentation, including Q&A
 - ❖ Actively listening to peers and asking insightful questions are highly recommended.
- **Topics:** Using the statistical methods discussed in class, you can **choose any economic research question you are interested in**. Some excellent work from previous students include
 - ❖ Is there a structural break in savings investment relationship after Covid?
 - ❖ What is the impact of media platform and sentiment on IPO underpricing?
 - ❖ Do most people like listening to songs with shorter duration and high noise?
 - ❖ etc.

Group Project – Presentation

- If you are not sure what a typical economic/econometric research question looks like, you can find one from/get inspired by the following journals:
 - American Economic Review
 - The Quarterly Journal of Economics
 - Econometrica
 - Journal of Political Economy
 - Any field top economic journals, such as Journal of Labor Economics, Journal of Public Economics, Journal of Urban Economics, etc.

Group Project – Presentation

■ Please include the following sections in your presentation:

- Introduction/Background
- Literature Review/Contribution
- Data
- Empirical Methods
- Results
- Conclusion

Presentation Schedule

Dec 8			
Group 1	4:00 – 4:20	Group 5	5:20 – 5:40
Group 2	4:20 – 4:40	Group 6	5:40 – 6:00
Group 3	4:40 – 5:00	Group 7	6:00 – 6:20
Group 4	5:00 – 5:20		

- Slots are open for booking now
 - Group leader please email me the full names and NetIDs of your group members and the time slot your group prefer
 - First come, first serve
 - All the groups must be formed before **Oct 1st**. Students who fail to join a group before the deadline will be randomly assigned to a group by the TA.
